About Agility

High-tech consumer electronics companies turn to Agility for unbeatable logistics support. We are the nation's largest contract logistics provider with 100,000 sqm of open yard storage and more than 29,000 sqm of warehousing, where we offer reverse logistics and other value-added services such as inspection, labeling and kitting. Our national road network helps automotive, high-tech, pharma, healthcare and retail customers lower their distribution costs, reduce supply chain complexity, and ensure timely deliveries.

Services

- Freight forwarding (air, ocean, road)
- Cross-border trucking
- Warehousing & distribution
- Customs clearance
- Project logistics

Customer Examples

Freight solutions designed for optimum performance

It's a big challenge to manage spare parts when you are one of the world's leading electronics companies with products that are highly sought after by consumers around the world. Before the entry of Agility, the company was operating a disorganized and costly distribution center for its spare parts in Dubai using freight forwarding as the main mode of transportation. Agility utilized our existing freight forwarding network and designed a one-stop solution for the customer to integrate and track their spare parts inventory across the Eastern Mediterranean. The solution included a customized EDI system that is integrated with the customer's ERP system to provide more accurate and timely freight data with total visibility. Agility's freight solutions not only improved the customer's ordering lead time but also led to significant cost savings.

Growing organically with a streamlined warehouse
